Education

Institute of Technology and Management, Gwalior 2024 – 2028
Bachelor of Technology in Computer Science Engineering CGPA: 7.58/10

Projects

GeoImpact Intelligence 2026

FastAPI • Neo4j • NetworkX • Next.js • Docker • SQLite — GitHub

- Developed a **graph-based intelligence platform** to analyze cascading impacts across 25+ geopolitical, cyber, economic, and disaster event categories.
- Modeled interconnected dependencies using **Neo4j** and **NetworkX** to simulate event propagation across related entities.
- Built a **confidence-based scoring engine** to filter low-confidence event chains and improve analysis accuracy.
- Developed a **FastAPI backend** with resilient fallback handling for missing graph relationships and external API failures.

Workflow Automation Platform 2025

Django • Django REST Framework • PostgreSQL • Redis • Celery • Docker — GitHub

- Developed a **workflow automation platform** supporting asynchronous task execution, retries, and usage-based API management.
- Built **RESTful APIs** using **Django REST Framework** with **JWT authentication**, subscription management, and usage tracking.
- Implemented **Celery** with **Redis** for background task processing, automatic retries, and exponential backoff to improve reliability.
- Containerized the application using **Docker** with **PostgreSQL**, **Redis**, **Nginx**, and **Gunicorn** for reproducible deployment.

Clinic Queue Management System 2025

FastAPI • Redis • WebSockets — GitHub — Live

- Developed a **real-time clinic queue management system** with patient token booking, tracking, and a dedicated doctor dashboard.
- Built a **FastAPI backend** with **Redis**-based token management and **WebSocket** communication for instant queue updates.
- Implemented **live waiting lists**, wait-time estimation, queue duration tracking, and one-click next-patient calling.
- Designed a **low-latency backend** optimized for real-time synchronization and lightweight local deployment.

Achievements

- 1st Place – AI Innovation Hackathon** for developing a real-time assistive navigation system for visually impaired users using computer vision.
- Top 10 Nationally – TechRythm Hackathon 2025** for designing a grievance redressal platform featuring complaint tracking, role-based workflows, and status monitoring.
- Solved **300+** Data Structures and Algorithms problems on **LeetCode**.

Technical Skills

Languages	Python, C++, Go, Java
Backend	Django, Django REST Framework, FastAPI, REST APIs, Authentication & Authorization, Celery
Databases	PostgreSQL, MongoDB, Redis
Frontend	React.js, HTML5, CSS3, Tailwind CSS
Tools	Git, GitHub, Linux, Docker, Nginx, Gunicorn
Concepts	Data Structures & Algorithms, Object-Oriented Programming (OOP), Caching, Authentication, Asynchronous Processing
